

KTEC MAGNETIC SEPARATOR

MAGNETIC SEPARATORS

KTEC Magnetic Separators are made with powerful rare earth magnet drums which produces magnetic field 75mm above the drum. Very fine particles will be arrested without slip. The magnetic material will not loose its strength even after number of years of use.

These filters are available in 30 LPM to 1200 LPM filtering capacity. These filters can be coupled with paper band, cartridge filters etc. We also manufacture range of paper bands filtration machines.

Where we stand different

Gauss Power:

We Provide High Gauss Power (2500 & 4500 Gauss) Magnetic Separators, eliminates need of secondary filtration, reduces consumable cost by increasing life of filter paper. Whereas 850 Gauss is for Regular Magnetic Separators.

Gear Box

Fintek Prefer and recommend standard Bonfiglioli Make Gearbox and Branded Motors. It increases reliability of the System. However we provide regular gearboxes (Low cost) on / if customer demands.

Advantages

Used Strong rare earth permanent magnet, arrest fine particles without slip.

No consumables required.

Dry cake discharge

Keeps Coolant Clean, Tank Cleaning Frequency reduced.

Extends life of coolant.

Increased life of grinding wheel & fluids.

Models Available

From 30 LPM to 1200 LPM.
